# Deployment Preparation and Staging Environment

1. Hoisting Platform:

- I have chosen Vercel for deployment of website.
- Linked a github Repository with a Vercel.
- Configured settings and script for deployment.

2. Configure Environment Variable:
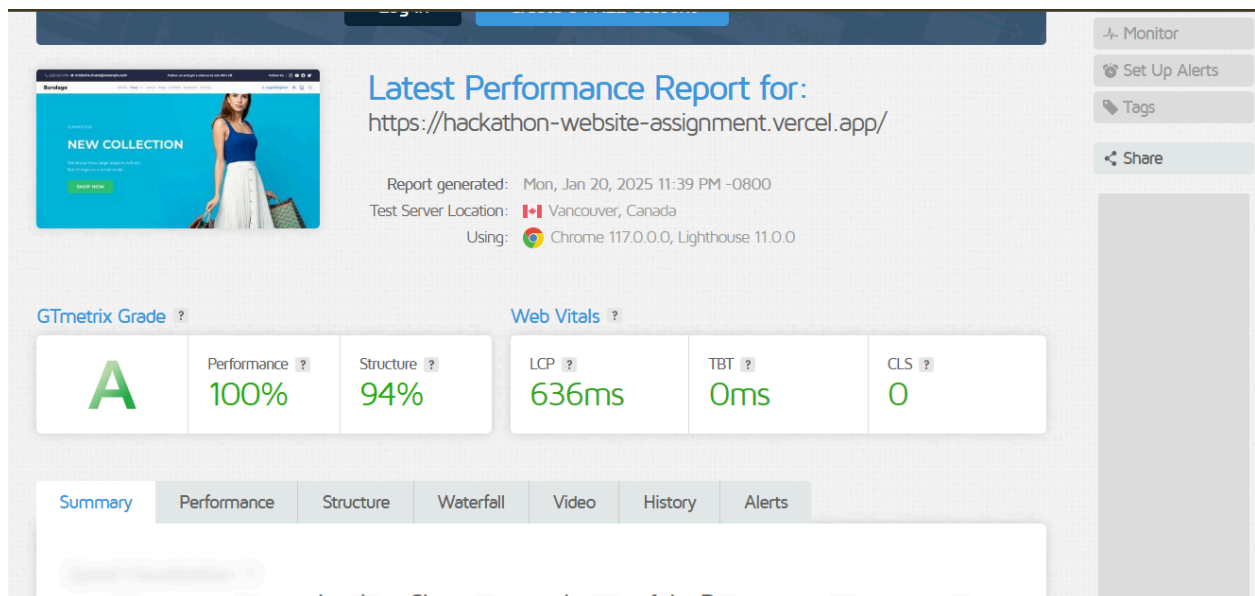

- Deploy to staging environment.

3. Staging Deployment:

- Deploy the application on Vercel staging environment.

- Ensures that there are no errors.

4. Staging Environment Testing:

- Checked that product listing, cart items and checkout is working properly.
- Used platform like gtmetrix.com to check for the performance of application.
- Validate the application to different browser like Chrome etc.

5. Conclusion:

Ensures that application is working properly with all the features.
